1x4=4

7. How do you say that the poet's grandmother was genius?

## Q.V Read the following passage and answer the questions that follow:

1x4=4 (2X2)

8. A sparrow is a small bird which is found throughout the world. There are many different species of sparrows. Sparrows are only about four to six inches in length. Many people appreciate their beautiful song. Sparrows prefer to build their nests in low places-usually on the ground, clumps of grass, low trees and low bushes. In cities they build their nests in building nooks or holes. They rarely build their nests in high places. They build their nests out of twigs, grasses and plant fibres. Their nests are usually small and well-built structures. The sparrows are some of the few birds that engage in dust bathing. Sparrows first scratch a hole in the ground with their feet, then lie in it and fling dirt or sand over their bodies with flicks of their wings.

a) Where do the sparrows prefer to build their nest?

b) How do the sparrows engage in dust bathing?
